### **NJDEP Issued Further Guidance to LSRP and PRCR on Permit Applications In Light of Timeframe Extensions**

The New Jersey Department of Environmental Protection (Department) issued a Notice of Rule Waiver/Modification/Suspension Pursuant to Executive Order No. 103 (2020) on February 1, 2021, relaxing certain remediation timeframes ( see <https://www.nj.gov/dep/covid19regulatorycompliance/docs/srp-remedial-timeframes-20210201.pdf>).

Based on this Notice, as well as the independent professional judgment of the retained licensed site remediation professional (LSRP), the person responsible for conducting the remediation (PRCR) may determine that it may be beneficial to withdraw a previously submitted Remedial Action Permit (RAP) application for cases that were subject to the statutory deadline to complete the remedial investigation by either May 7, 2014 or May 7, 2016 ("statutory case").

If the PRCR chooses to withdraw a RAP applicationsubmitted prior to March 15, 2021 for a statutory case, then an additional RAP application fee will not be charged when the subsequent RAP application is submitted provided the following conditions are met:

1. the Department has not issued either a Notice of Administrative or Technical Deficiencies (NOAD or NTD) for the original RAP application;
2. the request to withdraw the RAP application is received by the

- Department prior to April 1, 2021; and
3. the revised RAP application is received on or before May 6, 2022.

The request to withdraw the application should be submitted to Gary Sanderson, Bureau Chief, Bureau of Remedial Action Permitting at [Gary.Sanderson@dep.nj.gov](mailto:Gary.Sanderson@dep.nj.gov).

Please be advised that annual remediation fees still apply.

---

### **Person Responsible for Conducting Remediation (PRCR) Must Have Retained an LSRP to Receive Extension**

As stated above, a February 1, 2021 Notice of Rule Waiver/Modification/Suspension was issued by the Department to provide temporary relief from regulatory and mandatory time-frames during the pandemic and in accordance with Executive Order No. 103, however there must be an LSRP retained to receive relief. On or before March 18, 2021 an LSRP must be retained for existing sites for a PRCR to receive the extension outlined above or retain an LSRP for all new cases within the 45 day time period.

*Brilliant* has LSRPs on staff, so [contact us](#) today if you need to discuss your case and comply.

### **Site Remediation Professional Licensing Board Announcements**

At the February 2021 regular Board Meeting, the Site Remediation Professional Licensing Board announced it plans on holding the next Licensed Site Remediation Professional (LSRP) Licensing Exam in the Spring of 2022. When a firm date has been set, the Board will send another listserv and post the information on the Board's website. However, for planning purposes at this time, prospective LSRPs should expect the exam to occur in March 2022.

At the March 2021 regular Board Meeting, the Continuing Education Committee introduced two (2) motions, both of which were approved by the Board. The Board approved a modification of the Bylaws to allow the Continuing Education Committee to approve courses and programs, in lieu of the entire Board. This will expedite the process of approval, though all approved courses will continue to be reported to the Board.

The second motion will require approval of the Commissioner as well as Governor's Office and is intended to extend the relief of the rule provision at NJAC 7:26I-4.3(c) limiting Alternative Verifiable Learning Format (AVLF) credits. Currently the Board has approved relief of this rule requirement through December 31, 2021, however the new motion extends this relief to December 31, 2022. Once the Governor's Office reports back to the Board, more information will be provided.

### **Brilliant can assist with Free Product Recovery and Short Term Remedial Action**

The New Jersey Department of Environmental Protection (NJDEP) have been receiving Ground Water Remedial Action Permit (RAP) applications for sites where free and residual product have not been properly remediated in accordance with the Technical Requirements for Site Remediation [N.J.A.C. 7:26E-5.1(e)]. NJDEP states, Active System Ground Water RAP Applications have included proposals for final long-term remedies for free product recovery in the form of socks/sorbent pads, High Intensity Targeted (HIT)/ Enhanced Fluid Recovery (EFR) events, and/or manual recovery (e.g., bailing) of free product in impacted wells. These methods of free product recovery as per NJDEP are only acceptable as short-term interim remedial measures (IRMs) when source material (i.e., residual product in soil) is being investigated and remediated.

At sites where free product is present, the source area should be fully investigated and remediated. Sporadic recovery of free product is highly effective utilizing *Brilliant's* Multi-Phase Recovery (MPR), also known as HIT or EFR mobile systems, with availability today to assist you with site remedial action assistance. Whether a daily event or longer, *Brilliant* can mobilize to your project site, extract total fluids, with liquid storage of up to 500 gallons and disposal coordination possible. All vapors are treated onsite with our permitted Internal Combustion Engine.

For more information or to schedule an event today, contact [Jon Libourel](#).
